

EcoTruss

COMPANY

Sustainable Engineering with Timber

Since 2010 Eco Truss Company has been supplying its clientele all over the state, maintaining and building a strong reputation for great customer service, expert knowledge and the ability to problem solve with a can-do attitude. We are committed to producing superior products at competitive prices.

Eco Truss is 100% Tasmanian-owned and is the leading supplier of roof trusses, floor trusses, timber portal frames, floor and roof systems, framing supplies, and pre-fab walls. We are the main supplier of structural glulam products from Vicbeam in Victoria.

We always love to support like-minded Australian-owned businesses, with our other key partners being Multinail, Timberlink and Wesbeam.

Eco Truss is modern in its vision and how we always strive to stay updated on new technology, equipment and timber products. We are a face-to-face company that encourages our clients to talk to us about their vision, where we can offer solutions for each and every build.

Our passion swings from complex solutions associated with Tasmanian Architectural designs, to delivering budget options for the basic first home buyers' designs.

- + **Roof trusses** for every application large or small. Our roof trusses are designed by our inhouse expert staff.
- + **Floor trusses** for every application large or small. Each floor is individually designed and manufactured to suit particular requirements.
- + **Timber portal frames** are an excellent option for large span commercial warehouses, open plan architectural designs or small scale sheds where extra height and/or spans are required. Visit our Cambridge factory to see a perfect example of a timber portal frame.
- + **Timber framing supply** for all building projects in the residential and commercial construction industry.
- + **Floor & roof systems.** We proudly supply Australian manufactured structural LVL for all framing requirements for both roof and floor systems.
- + **Prefabricated wall frames** using the latest software and construction methods. All our prefabricated wall frames come fully certified.
- + **EcoTruss Company** has partnered with **Vicbeam** in Victoria which supplies a vast range of structural glue laminated timber products. This product has opened a whole new world of building design where nearly everything is possible and the building gets even more exciting!

EcoTruss is committed to bringing our Architects, engineers, drafters, builders, and customers endless options to achieve the desired look and feel of any modern home design or extension.

As we have now partnered with Vicbeam, not only can we supply you with all things related to framing but we can offer more solutions at the design stage. Vicbeam products can replace structural steel as well as offer an aesthetic look and feel; pushing the boundaries and giving you options to create something totally unique.

All of Vicbeam's timber is sourced from sustainable mills that have a PEFC accreditation which means it has a forest accreditation globally and locally.

Let's take a look at the products.

**+ ACCLAM8 Accoya Glulam**

This is an A-grade superior product, versatile in every sense. Accoya is acetylated pine which means it is treated using a non-toxic method, which prevents the cell structure of this timber from absorbing water, impervious to swelling, shrinkage or distortion.

It's beautiful as a timber feature inside or out and requires minimal maintenance.

**+ Vicbeam 10 Pine Glulam**

This is made from Radiata Pine or White and Red Baltic Pines. Available as an A or B appearance grade. Versatile in its uses, perfect for structural and featured design.

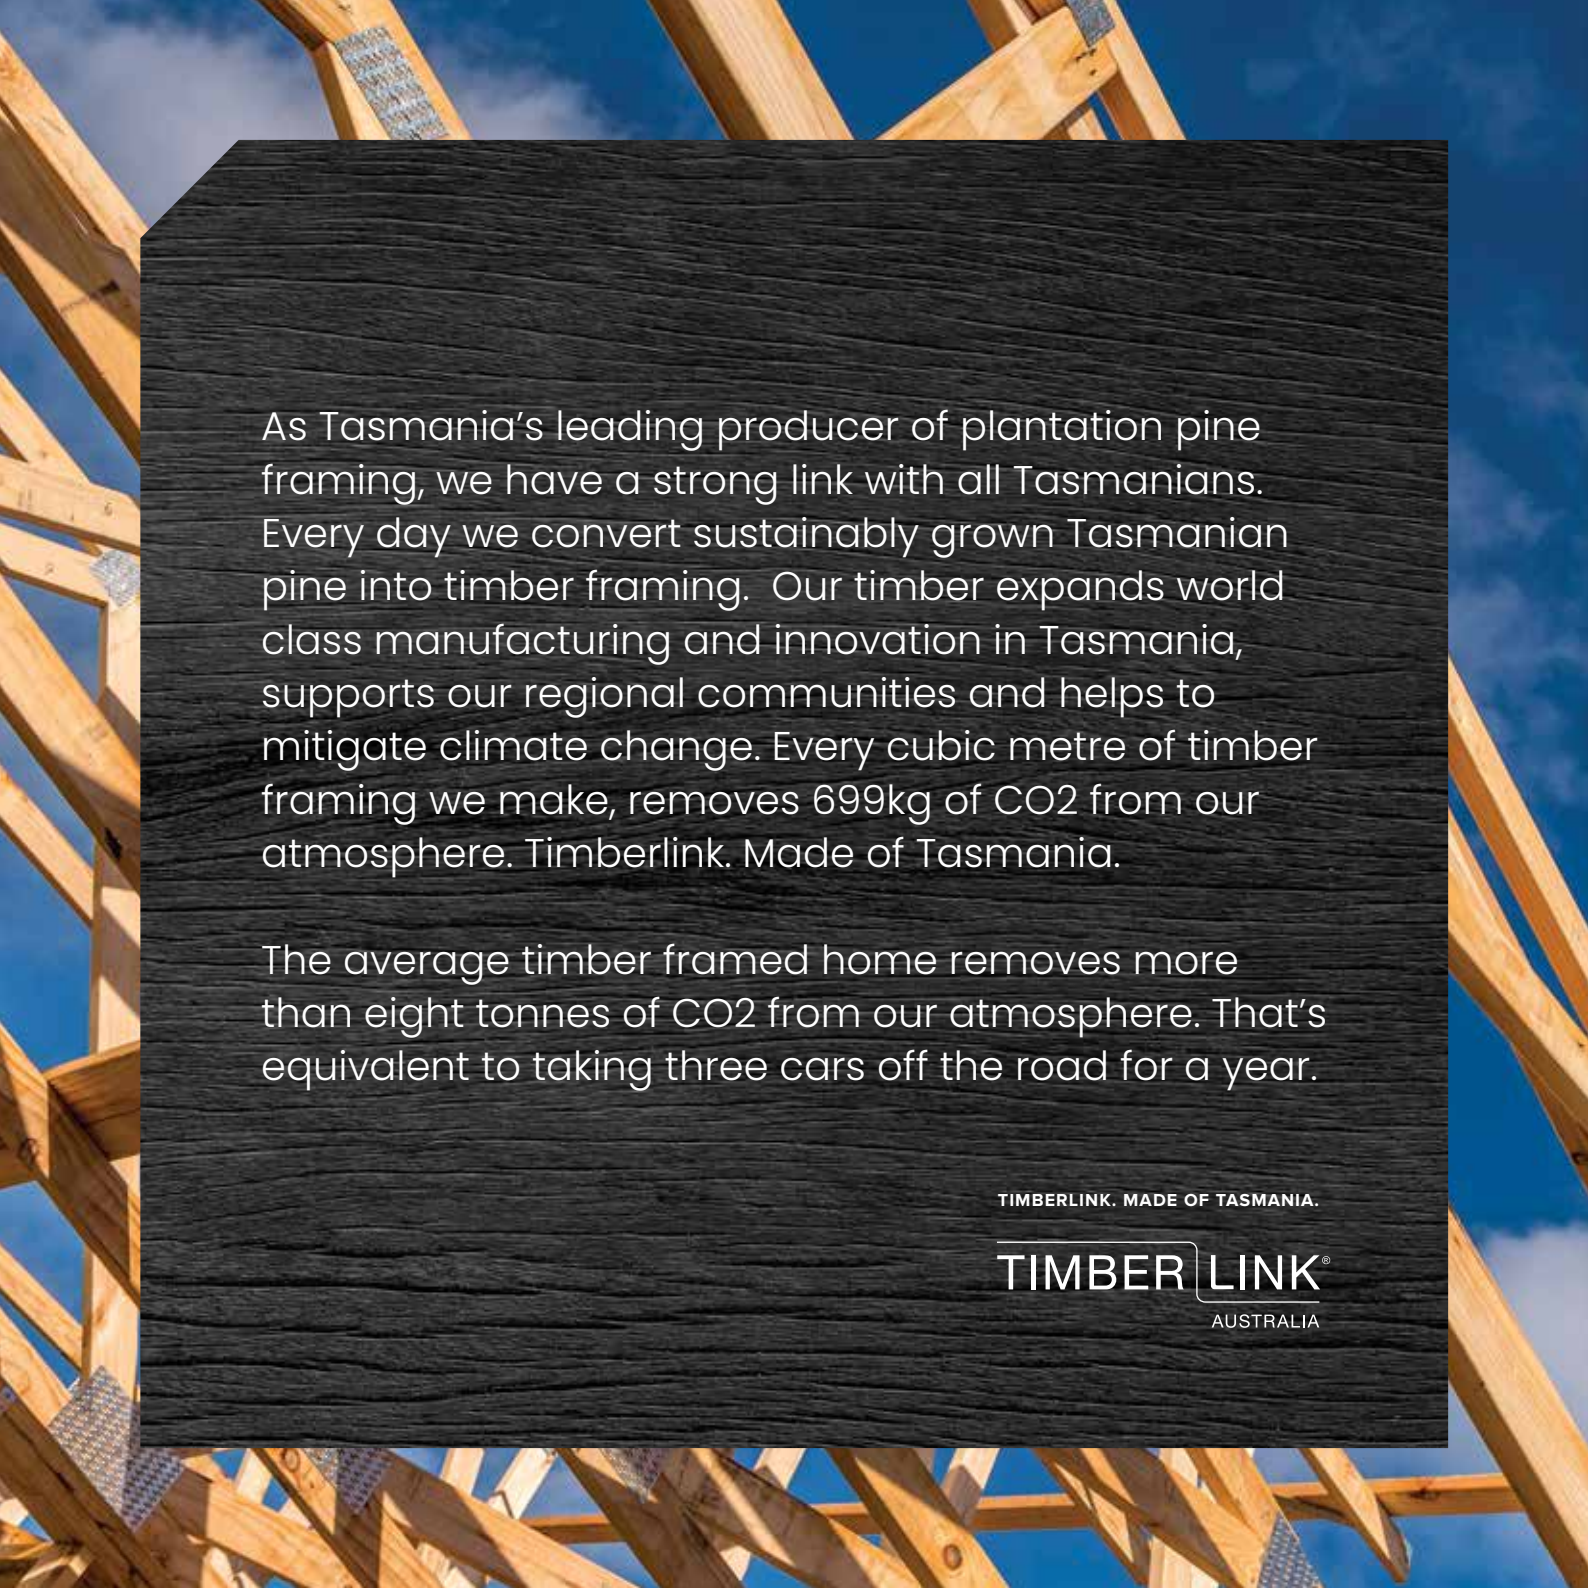

**+ Tasbeam 15 Hardwood**

Sustainably sourced from the alpine regions of Tasmania, Tasbeam 15 is strong and beautiful. It can be H3 treated to ensure durability as required.

The strength rating  
of Vicbeam products  
meets the ratings  
that engineers and  
Architects can trust  
and use creatively.

LAMINATED TIMBER SPECIALISTS

As Tasmania's leading producer of plantation pine framing, we have a strong link with all Tasmanians. Every day we convert sustainably grown Tasmanian pine into timber framing. Our timber expands world class manufacturing and innovation in Tasmania, supports our regional communities and helps to mitigate climate change. Every cubic metre of timber framing we make, removes 699kg of CO<sub>2</sub> from our atmosphere. Timberlink. Made of Tasmania.

The average timber framed home removes more than eight tonnes of CO<sub>2</sub> from our atmosphere. That's equivalent to taking three cars off the road for a year.

TIMBERLINK. MADE OF TASMANIA.

**TIMBERLINK**<sup>®</sup>  
AUSTRALIA

Multinail is a dynamic Australian business providing the timber prefabrication industry with high quality metal connectors, software and engineering services to enable the timely and cost effective construction of residential homes, commercial buildings and medium rise multiunit projects.

Wesbeam is Australia's only LVL and I-joist manufacturer and distributor with a world class factory in Perth and distribution centres around the nation. We guarantee a secure and stable local supply chain by using locally sourced materials and not relying on external partners or imports.

Our LVL products are made from renewable, sustainably sourced timber and are designed to span further, carry greater loads and withstand the tough Australian climate.
